A large, faint, semi-transparent watermark of the TRX logo is visible in the background of the right half of the image. It features the same crescent moon and star symbol followed by the letters "TRX".

Strong, young newcomers.

Introducing the TRX™ Cymbals Co.— the first and only line of genuine, handcrafted Turkish cymbals specifically developed to provide the extreme tonal, performance and appearance characteristics demanded by today's progressive drummers and drumming styles.

To bring this ancient art to modern artists, TRX blends our state-of-the-art designs with traditional Turkish materials and manufacturing methods. This unique combination offers contemporary players legendary Turkish quality, consistency, versatility and variety while also giving them a full range of fresh, exciting, musically relevant sounds to choose from.

In fact, with TRX' four series— DRK, MDM, ALT and BRT— classified on the basis of their distinctively different tone qualities, drummers

are now free to pick their cymbals based solely on sound and application instead of hype. And, since they are all produced from our exclusive B20-Plus bronze formula and handcrafted by our master cymbalsmiths, every TRX cymbal not only performs brilliantly on an individual basis, each cymbal can also be easily combined with other models, sizes and series to create a virtually unlimited variety of highly personal yet completely complementary cymbal sets.

Strong, young newcomers, TRX custom-crafted Turkish cymbals are available in a wide selection of types, weights, sizes and finishes to fit the widest spectrum of sounds and situations... from Jazz, R&B and World music to Country, Punk, Pop and Rock... whatever you play now or whatever comes next.

THE ANATOMY OF A TRX CYMBAL

bell

taper

face/bow

edge

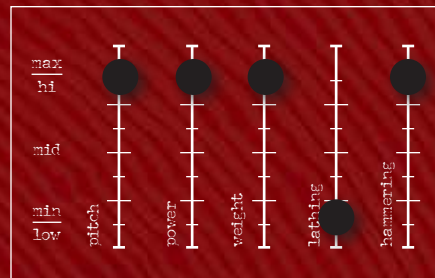

The overall diameter and weight of each cymbal determine its basic pitch, power, clarity/sustain and durability. In the hands of our master cymbalsmiths, these factors are further controlled and modified by the taper, profile and bell size as well as the type and amount of hammering, lathing and buffing.

Ear Piercing.

Extra heavy with a brilliantly polished, unlathed playing surface, the TRX BRT Series has a focused, high-frequency spectrum and an intense, powerful sound. However, even though it provides increased presence and projection in high-volume, high-energy drumming situations, due to the rich, multi-faceted tone of our B20-Plus alloy and the skillful hands of our expert cymbalsmiths, the BRT Series is also extremely versatile and incredibly musical.

Young Turks.

Incorporating thicker, heavier castings, a raw bell and a micro-lathed playing surface with multi-level hammering, the TRX ALT Series is a new standard of sound for a new generation of drummers. But ALT Series cymbals are not just stronger, brighter and more responsive than conventional midrange cymbals— they have been carefully designed and custom-crafted to offer drummers an all-around alternative for today's more aggressive modern and mainstream styles.

You're Young, Not Deaf.

Medium weight with traditional-style lathing, buffing and hammering, the TRX MDM Series is an all-purpose line developed to meet a diversity of contemporary musical needs. MDM cymbals provide exceptional sound and performance in a variety of general drumming applications—bringing the superior quality, consistency and individuality of handcrafted Turkish cymbals to today's young but discriminating drummers.

Get Hammered.

Ultra-thin and cast from our ageless and versatile B20-Plus bronze formula, the TRX DRK Series is known for its dark, earthy, old-skool sound. And, in addition to its balanced blend of depth and warmth, the line's classic tonal tendencies are further enhanced by a distinctive low-profile design and an unlathed, natural finish as well as an exclusive pre-aging process and extra-deep hand-hammering by our master cymbal smiths.
